# Binary Number Conversions 

Professor Don Colton<br>Brigham Young University Hawaii

Several number bases are common in the Information Technology field, including networking. Binary (base two) is the underlying model for most data communications. Octal (base eight) and hexadecimal (base 16, also called "hex") are popular shorthands for presenting binary data. Decimal (base ten) is the number base we most commonly use. It is useful and occasionally important to be able to convert numbers from one base to another.

## 1 Binary Shortcut

How do we know that $2^{16}$ is about 64 thousand? To quickly answer such questions it is helpful to know two facts: (a) the powers of two up to 10 , and (b) the fact that $2^{10}=1024$ is almost one thousand.

| Exact Powers of Two |  |  | Approximate |  |
| :--- | :---: | :--- | :---: | :--- | :--- |
| $2^{1}=$ | 2 | $2^{6}=$ | 64 | $2^{10}=$ thousand |
| $2^{2}=$ | 4 | $2^{7}=$ | 128 | $2^{20}=$ million |
| $2^{3}=$ | 8 | $2^{8}=$ | 256 | $2^{30}=$ billion |
| $2^{4}=$ | 16 | $2^{9}=$ | 512 | $2^{40}=$ trillion |
| $2^{5}=$ | 32 | $2^{10}=$ | 1024 | $2^{50}=$ quadrillion |

In the case of $2^{16}$ we know that $2^{6}$ is 64 , so $2^{16}=2^{6} \times 2^{10}$ is about 64 thousand and $2^{26}=2^{6} \times$ $2^{10} \times 2^{10}$ is about 64 million.

Similarly, $2^{4}$ is 16 , so $2^{14}$ is about 16 thousand and $2^{24}$ is about 16 million.

## 232 Bits

On the Internet, things are organized by bits. Take the following string of bits.

10111010010011100101001000000111
Generally we write $\operatorname{IPv} 4$ addresses in base 10. The first eight bits (1011 1010) are called the first octet. They translate to 186 . The second eight bits (0100 1110) are called the second octet. They translate to 78. The third eight bits (0101 0010) are called the third octet. They translate to 82 . The fourth eight
bits (0000 0111) are called the fourth octet. They translate to 7 . Generally we would write this address in "dotted-quad" notation, with each octet in base 10, like this.
186.78.82.7

## 3 Binary Numbers

The binary number system uses only two digits: zero and one. Often instead of calling them digits, they are called bits, which is short for bi(nary digi)ts. With this restriction, instead of counting 1, 2, 3, $4,5, \ldots$ we count $1,10,11,100,101, \ldots$ It is a fully-functional numbering system, able to represent even numbers like $\pi$ (3.1415) as 11.001 (with a bunch more digits). It takes about three times as many bits to express a number in binary as it does in base 10.

Data transmission on the Internet is generally thought of in terms of binary numbers because the underlying physical phenomena can be comfortably described in that way. Because the underlying nature is generally dealt with in binary, it is important for networking practitioners to also work in binary when appropriate.

### 3.1 Divide and Shift

Divide and Shift is one easy method to convert a number from base 10 to binary. Divide it by two repeatedly. Each time you divide, take the remainder and add it to the front of the binary number you are constructing. Here for example we will convert 2005 (the year this tutorial was written).

Taking 2005, we divide by two to get 1002.5. But let's keep it to whole numbers. Dividing we get 1002 with a remainder of 1 . We copy the remainder to the front of the binary number we are building.

| 2005 |  | our starting number |  |
| ---: | ---: | :--- | :--- |
| 1002 | 1 | divide and copy |  |
| 501 | 01 | divide and copy |  |
| 250 | 101 | continue |  |
| 125 | 0101 | continue |  |
| 62 | 10101 | continue |  |
| 31 | 010101 | continue |  |
| 15 | 1010101 | continue |  |
| 7 | 11010101 | continue |  |
| 3 | 111010101 | continue |  |
| 1 | 11 | 11010101 | continue |
| 0 | 111 | 11010101 | continue |
| 0 | 0111 | 11010101 | okay, stop |

We could keep putting zeroes at the front, but there is no point.

2005 in base 10 becomes $111,1101,0101$ in base 2.
To convert a number from base 2 to base 10 , do the same thing in reverse. Double the base 10 number and add the first bit of the base 2 number. We will covert our second octet from above.

| 0 | 01001110 | our starting number |
| ---: | ---: | :--- |
| 0 | 1001110 | double and add zero |
| 1 | 001110 | double and add one |
| 2 | 01110 | double and add zero |
| 4 | 1110 | double and add zero |
| 9 | 110 | double and add one |
| 19 | 10 | double and add one |
| 39 | 0 | double and add one |
| 78 |  | double and add zero |

0100,1110 in base 2 becomes 78 in base 10 .

### 3.2 Powers of Two

Powers of Two is another easy method to convert a number from base 10 to binary. We start with a table of powers of two. We subtract the largest power repeatedly. Then we add up the results. Again we will convert 2005.

| 1 |  | 1 |
| ---: | ---: | ---: |
| 2 |  | 10 |
| 4 |  | 100 |
| 8 |  | 1000 |
| 16 |  | 10000 |
| 32 |  | 100000 |
| 64 |  | 1000000 |
| 128 | 1000 | 0000 |
| 256 | 1 | 0000 |
| 512 | 100000 |  |
| 50000 | 0000 |  |
| 1024 | 100 | 0000 |
| 0000 |  |  |
| 2048 | 1000 | 0000 |

| 2005 |  | our starting number |  |
| ---: | ---: | :--- | :--- |
| 1024 | 10000000000 | largest power of two |  |
| 981 |  | after we subtract |  |
| 512 | 1000000000 | largest power of two |  |
| 469 |  | after we subtract |  |
| 256 | 100000000 | largest power of two |  |
| 213 |  | after we subtract |  |
| 128 | 10000000 | largest power of two |  |
| 85 |  | after we subtract |  |
| 64 | 1000000 | largest power of two |  |
| 21 |  | 1000 | after we subtract |
| 16 |  | largest power of two |  |
| 5 |  | 100 | after we subtract |
| 4 |  | largest power of two |  |
| 1 |  | 1 | after we subtract |
| 1 |  | largest power of two |  |
| done |  |  |  |

Similarly we can add up the powers of two to get the answer in base 10 .

| 78 | 01001110 |
| ---: | ---: |
| 2 | 10 |
| 4 | 100 |
| 8 | 1000 |
| 64 | 1000000 |

$64+8+4+2=78$, our answer.
Students should be able to convert numbers using either method, and should be confident with at least one method.

### 3.3 Numbers to Memorize

To speed up calculations, it is helpful to memorize the sequence of powers of two, at least through 1024. When I say memorize the sequence, I don't mean that you remember that 64 is the sixth number, but rather that 64 comes after 32 and before 128 . When we learn the alphabet, we often do not know that T is the 20th letter, but we know it is part of the sequence "Q R S T U V W."

It is also helpful to know the powers of two subtracted from 256, which are also the negative powers of two; a series of all ones followed by a series of all zeroes.

## Negative Powers of Two

| 255 | 1111 | 1111 | $256-1$ |
| :--- | :--- | :--- | :--- |
| 254 | 1111 | 1110 | $256-2$ |
| 252 | 1111 | 1100 | $256-4$ |
| 248 | 1111 | 1000 | $256-8$ |
| 240 | 1111 | 0000 | $256-16$ |
| 224 | 1110 | 0000 | $256-32$ |
| 192 | 1100 | 0000 | $256-64$ |
| 128 | 1000 | 0000 | $256-128$ |

There are four numbers that are particularly important. They are $0^{*}, 0^{*} 1,1^{*}$, and $1^{*} 0$, with any number of bits.

| $0^{*}$ | $\ldots$ | 000000000000 | all zeroes |
| ---: | :--- | :--- | :--- |
| $0^{*} 1$ | $\ldots$ | 000000000001 | zeroes and a one |
| $1^{*}$ | $\ldots 111111111111$ | all ones |  |
| $1^{*} 0$ | $\ldots$ | 111111111110 | ones and a zero |

Powers of Two

| 1 |  | 1 |
| ---: | ---: | ---: |
| 2 |  | 10 |
| 4 |  | 100 |
| 8 | 1000 |  |
| 16 | 10000 |  |
| 32 | 100000 |  |
| 64 | 1000000 |  |
| 128 | 10000000 |  |
| 256 | 100000000 |  |
| 512 | 1000000000 |  |
| 1024 | 1000000 | 0000 |

## Negative Powers of Two

| 255 | 11111111 | 256-1 |
| :---: | :---: | :---: |
| 254 | 11111110 | 256-2 |
| 252 | 11111100 | 256-4 |
| 248 | 11111000 | 256-8 |
| 240 | 11110000 | 256-16 |
| 224 | 11100000 | 256-32 |
| 192 | 11000000 | 256-64 |
| 128 | 10000000 | 256-128 |

## Four Important Numbers

There are four numbers that are particularly important. They are $0^{*}, 0^{*} 1,1^{*}$, and $1^{*} 0$, with any number of bits.

| $0^{*}$ | $\ldots$ | 000000000000 | all zeroes |
| ---: | :--- | :--- | :--- |
| $0^{*} 1$ | $\ldots$ | 000000000001 | zeroes and a one |
| $1^{*}$ | $\ldots$ | 111111111111 | all ones |
| $1^{*} 0$ | $\ldots$ | 111111111110 | ones and a zero |
